

Story#	User Story	Confirmations	Priority (1-5) with 1 highest
1	As a California Resident I want to subscribe to emergency and non-emergency email notifications.	California Resident should provide a login name and email (login name can be email), first name, last name, and residence address	1
2	As a California Resident I want to be able to change my subscription for email notifications	California Resident should be able to use profile/account information to login and change profile information	1
3	As a California Resident I want to receive Flood Watch Notifications	California Resident should be provided with notification options on topics that are of interest to the resident.	2
4	As a California Resident I want to receive Weather notifications.	California Resident should be provided with notification options on topics that are of interest to the resident.	2
5	As a California Resident I want to subscribe to emergency and non-emergency SMS (text) notifications.	California Resident can provide a mobile number and accept to receive texts if they choose, acknowledging that they may have provider costs.	3
6	As a California Resident I want to be able to change my subscription for SMS (text) notifications	California Resident can change the mobile number used for text notifications, and they can "unsubscribe" from text messages as well.	3
7	As a California Resident I want to indicate whether I need help in an evacuation due to disability or medical issues.	The thought here, is that an Admin can either text or email these folks to let them know who to contact for evacuation help or to send a message with the address to local emergency services personnel to help with any evacuation.	1
8	As a California Resident I want to identify multiple locations for notification (i.e. home, work, elderly family location, etc.)	As an evolution of subscription, a user could create notification preferences by location (perhaps at the city level only), and identify the types of notifications for each city and whether they want email or sms.	4
9	As a California Resident I want to identify the types of notifications I want to subscribe to.	As the product evolves to support and include more events that can result in notification, a user could indicate a preference for those types of notifications.	4

10	As a California Resident I want to be able to view notifications that I have received in the last 30 days.	To view notification that have been sent to the user but may not be on their device, this can provide a history of notifications they have received within the application.	2
11	As an Administrative User I want to be able to send emergency and non-emergency email notifications to subscribers.	An Administrative User can have the ability to send an ad hoc (Public Information) email message or a message related to a specific event to subscribers.	1
12	As an Administrative User I want to be able to include subscribers for receipt of notification by location	An Administrative user can have the ability to send a location boundary for a particular notification. i.e. 50 mile radius from an particular event location.	2
13	As an Administrative User I want to be able to send emergency and non-emergency SMS (text) notifications to subscribers.	An Administrative User can also indicate the text to send via SMS for the alert/notification.	3
14	As An Administrative User I want to be able to define the subject and text for an email notification.	An Administrative user should be able to identify the subject for the notification as well as the text of the notification.	1
15	As an Administrative User I want to be able to format the email text to include bolding and underlining (HTML) format.	As an enhancement/progression to the product, an Administrative user would be able to format the email as HTML to highlight important information. As well as identify the severity.	3
16	As an Administrative User I want to configure automatic notifications based on available service data from state sources.	As a progression to the product, an administrative user could select a data source and configure a notification to send out based on source data (and source data lat/long) and radius to send notifications when this data is updated.	4
17	As a California Resident I want to be able to reset my password if I forgot it.	A California Resident should have the ability to reset their password.	4
18	As a Administrative User I want to be able to reset my password if I forgot it.	An Administrative user should have the ability to reset their password	4
19	As an Administrative User I want to be able to add additional Administrative users to the system	A seeded administrative user should have the ability to create additional administrative users that have the ability to send messages.	5
